

Consulting Model for a Design Engineering Company

A Norwegian design engineering company was looking to setting up a strong and dynamic ongoing pool to work on a critical offshore project. They wanted people with strong skills in various disciplines of Engineering and 3D modeling skills to complete this job.

The client was short of skilled manpower when the detail-engineering phase started. The client approached Arya to augment their resources with Engineers and designers who could work on this mission critical project.

Arya's scope of services involved over 40000 man hours of work spread over a span of 12 months. The project involved detail Engineering of a FPSO with Civil, Structural, Piping, Equipments, Electrical and Cabling components.

Arya was able to fulfill the entire client requirement within the specified time. Client satisfaction is testimony to the fact that Arya continues to provide services to this client on other projects within the Oil & Gas Industry.
